Faster, leaner, simpler

Many build-ups take a longer time than necessary. Many retailers don't know that it is possible to do it faster. Doing it as you have always done it means there is no development.

We know, we have been there ourselves.

Once a famous entrepreneur known for thinking outside the box, challenged us. We took on the challenge and developed a solution. Hence we had moved the benchmark and started the development.

We have developed a method to deliver projects faster, leaner and simpler, exceeding the established perception.

– a method that makes you start selling earlier!

thegoodpeople.se

Who are thegoodpeople.se?

We are a network with the world's best retailing specialists. We are specialised in retail fit-out and commercial build-ups and have worked with sales area's up to 12 000 m2.

We only work with experienced service partners with a well documented track record, time efficient and high quality project implementation.

We can adapt and tailor make support based on your needs. We offer the best solution by adapting to your needs:

- planning support
- supervisors
- systems
- methods for self-support

What can we offer?

Planning, execution and documentation

We can offer turnkey solutions for buildups and remodelling of retail establishments.

We can execute and steer every step of the establishment process including the time planning.

This makes the project faster, leaner and simpler – for everyone. The time saved is subsequently the basis for the economic windfall.

We can develop and document a tailor made method for your business.

What is turnkey solutions?

When we offer turnkey solutions we include:

- Time and project planning
- Project leading, project steering and follow up
- Execution of all flooring, walls and ceiling work (open or closed ceiling)
- All the surface work such as painting, plaster, flooring, tiling, etc.
- Assembling and mounting of all shop fittings
- Assembling and placement of all customer guidance systems
- Assembling and mounting of all checkouts and sales counters and other service units
- Assembling and placement of general and commercial lighting
- Installation of electricity from existing access points
- Hanging of commercial communication
- Assembling of sales and display solutions
- Goods stacking according to plan
- Furniture assembling for showrooms and other areas
- Energy declaration and certification

30% of time saving is in the brief

A full brief including clear objectives and description of the final products is the basis for all time and work planning. Our experience shows that 30% of the time savings is in the original order form.

Clear guidance of experienced supervisors

Each project is led by an experienced supervisor.

The supervisor monitors and controls the project progress and by working through the team's flexible nature. A flexible team means that the challenges that arise can be overcome together, in time and with quality.

A new holistic approach to planning and implementation

Changes and new targets call for new methods and approaches. Each team member must be prepared for the new ways of working.

This is done by preparatory briefings with our and your staff through dialogue and reconciliation for improved understanding of how we intend to achieve the new targets together.

Full logistical planning

-the right thing -at the right time -in the right sequence

Full logistical planning in the beginning avoids downtime that jeopardizes the time plan. Good logistical planning includes such as ordering supplies and building materials to ensure that sequences will go in the right order. When you unload a container or truck, the material must be stowed so that it is picked up in the order in which it is assembled or installed.

Of course, this also means that everything is ordered in the right time, quantity and sequence.

Project smart, flexible and experienced resources

Construction and installation teams are especially compiled with specialists and multi-skilled craftsmen who are involved throughout the project.

This creates flexibility and reduces the risk of inefficient time, which contributes to the time saving.

Together we save time and money

thegoodpeople.se

Module-based standard solutions

Time saving is achieved by using standard solutions that work in both large and small stores, adaptable to the retail space available. In addition to purchasing advantages, it becomes easier to plan all fitted module wise and the construction teams can quickly assemble and position them.

Daily monitoring

The ongoing work is monitored on a daily basis together with the teamleader to determine that the work is proceeding according to the adopted plan.

The flexible working team has a key role. They are there to adjust or compensate the progress.

Quality

The quality of the project is better influenced in the project's early stages. The project must follow a planned course where the scope of the project is gradually checked and fixed.

By identifying and clarifying early threats we can eliminate their harmful effects and reach the desired high quality goal.
